

# Ever Wondered

Natural gas is an energy resource alternative to oil. It's a high-efficiency, low-cost, low-environmental-pollution fuel. The Al Shamal gas field in Qatar is considered the largest single natural gas field in the world. It produces clean gas and has total reserves estimated at around 500 trillion cubic feet. More information about Qatar's natural gas resources can be obtained through research, an exciting and rewarding way to find out more about a topic of interest. Qatar's Supreme Education Council is rising to the challenges of the 21st Century, in a highly-competitive, interconnected global society, by seeking to stimulate the minds of tomorrow. The council is actively fostering a culture of research and exploration, so that students learn to verify newly acquired information and how to satisfy a thirst for more. For more information on Research, check the website of the Supreme Education Council: <http://www.english.education.gov.qa/content/general/detail/5806>
